DemarcAngelTM

DEMARCATIION SYSTEM

Demarc Angel provides a demarcation system for rooftops.

Applications may be for the purpose of preventing access to hazards during regular rooftop maintenance or to provide safe access across the roof.

Wherever roof access is required designers are tasked with creating a safe route which should be identified by a demarcation system. Under Working at Height Regulations a distance of 2m from a leading edge or fall risk must be protected.

By utilising components used in our Guard Angel, Weight Angel and Roof Angel products Demarc Angel is a system manufactured from tried and tested materials.

Robust and easy to install Demarc Angel is a simple and lightweight solution for height safety requirements. When a quick demarcation is needed, Demarc Angel system is the perfect solution.

As a high visibility, maintenance free demarcation system it is ideal for providing demarcation around plant, equipment and fragile materials or as an economical solution to guardrail, providing it is placed at least 2m from the roof edge.

The system is compact making it portable and easy to assemble.

The design with a recycled PVC base weighing 23kg prevents the system from falling during severe weather conditions.

The system incorporates a high visibility, two colour chain which links between the support posts and connects easily to the clamping system.

Key Features:

- High visibility demarcation system
- Cost-effective
- Rapid Installation
- Robust materials
- Long Spans
- Lightweight Solution
- Maintenance Free
- Free Standing or Fixed Base options
